

Group Equivariant Deep Learning

Lecture 1 - Regular group convolutions

Lecture 1.1 - Introduction

Desirable properties of neural networks, invariance, equivariance, weight-sharing

Group Equivariant Deep Learning

Lecture 1 - Regular group convolutions

Lecture 1.1 - Introduction

Desirable properties of neural networks, invariance, equivariance, weight-sharing

Lecture 1.2 - Group Theory | The basics

Groups, group product, inverse, action, representation, affine groups $G = \mathbb{R}^d \rtimes H$

Lecture 1.3 - Regular group convolutions | Template matching viewpoint

General group convolutional NN design with example for roto-translation equivariance (SE(2))

Lecture 1.4 - SE(2) Equivariant NN Example | With histopathology images

Visual example for roto-translation equivariance (SE(2))

Lecture 1.5 - A brief history of G-CNNs

Lecture 1.6 - Group Theory | Homogeneous/quotient spaces

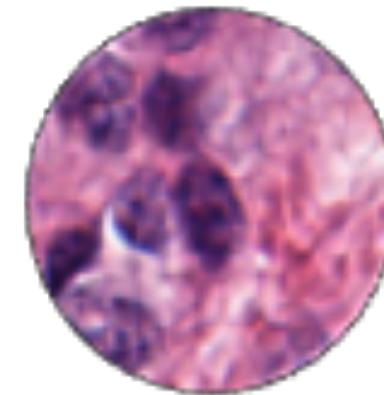

Transitive action, homogeneous space, quotient space, examples

Lecture 1.7 - Group convolutions are all you need!

Equivariant linear layers between feature maps are group convolutions

Geometric guarantees (invariance)

Example: Detection of pathological cells

Common approach: data-augmentation

Geometric guarantees (invariance)

Example: Detection of pathological cells

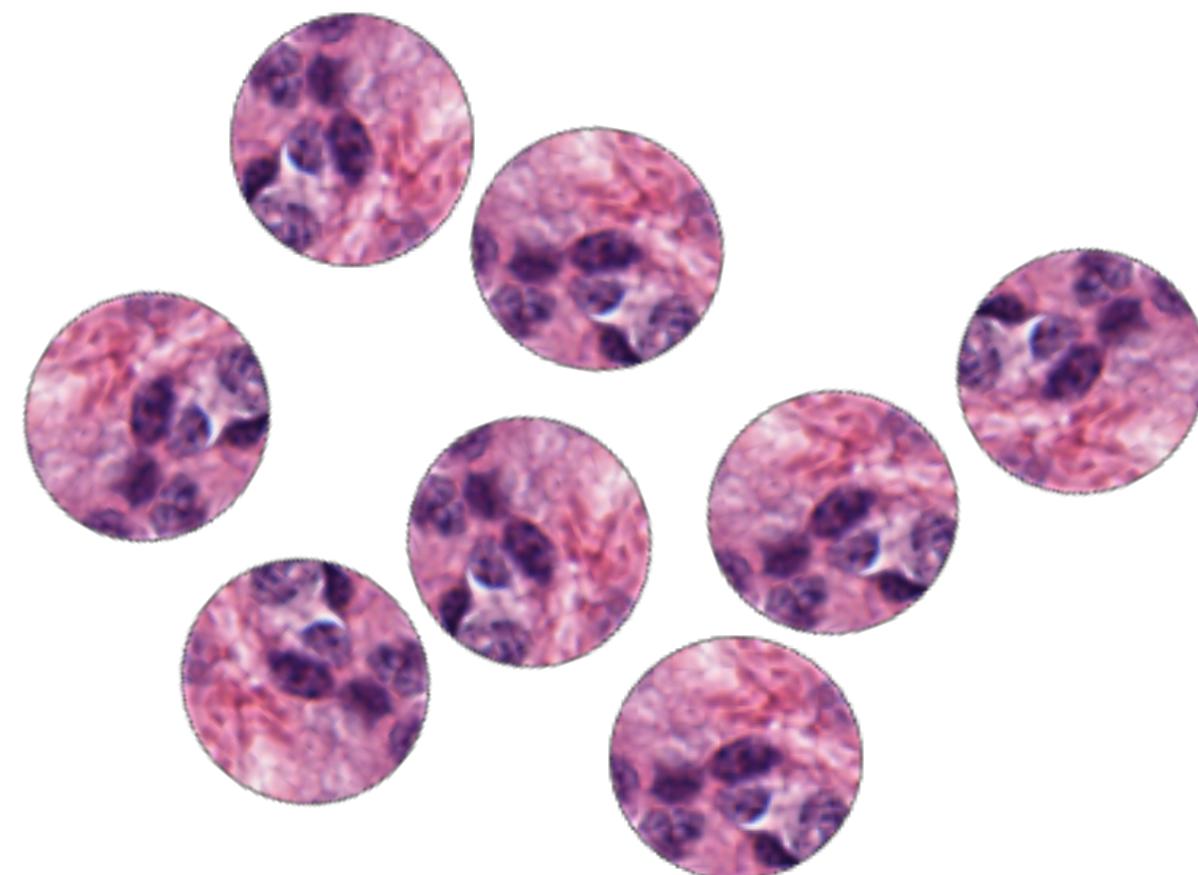

Healthy

?

Pathological

Common approach: data-augmentation

Issues:

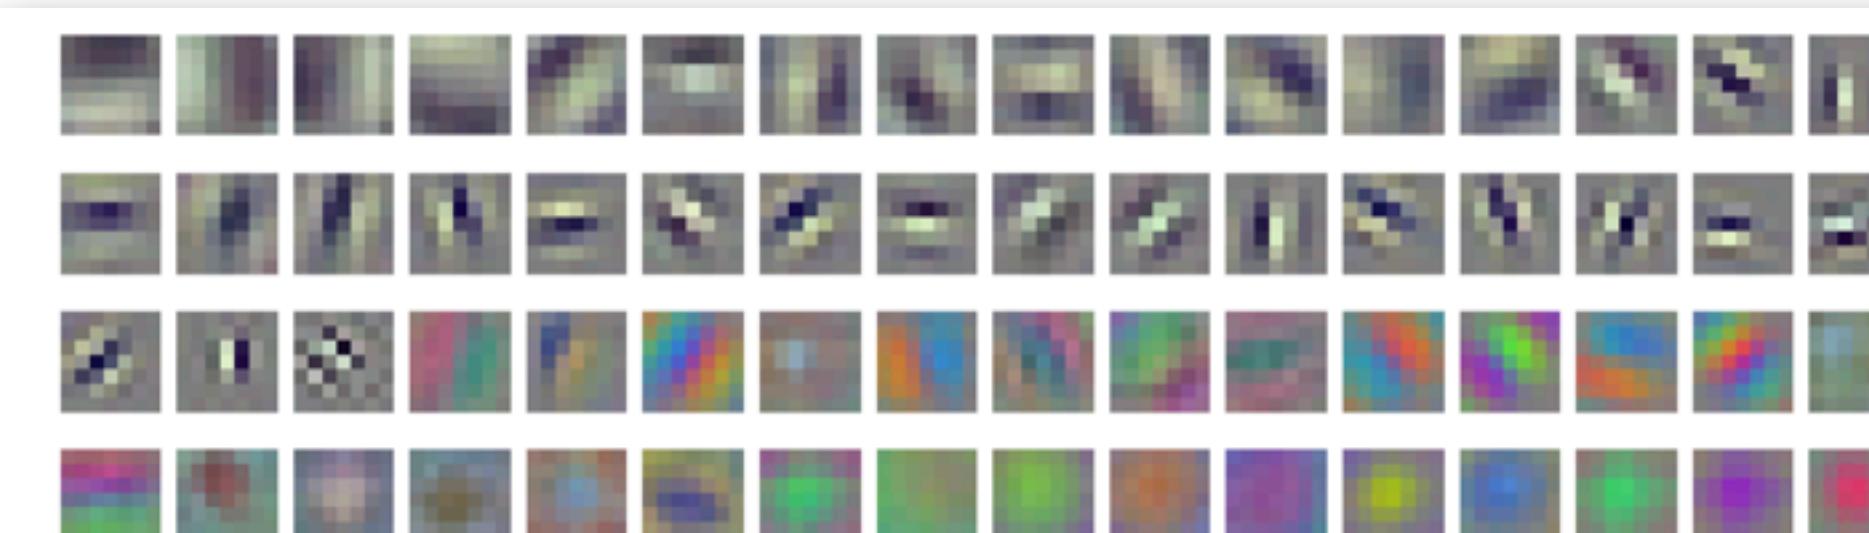

- Still no guarantee of invariance
- Valuable net capacity is spent on learning invariance
- Redundancy in feature repr.

The weights for the units in the first layer of the TF-Slim [11] version of InceptionV1 [8].⁵ Units are sorted by the first principal component of the adjacency matrix between the first and second layers. Note how many features are similar except for rotation, scale, and hue.

Equivariant Features

Rotational Equivariance: One example of equivariance is rotated versions of the same feature. These are especially common in early vision, for example curve detectors, high-low frequency detectors, and line detectors.

Geometric guarantees (equivariance)

CNNs are translation equivariant

Via convolutions

Geometric guarantees (equivariance)

CNNs are translation equivariant

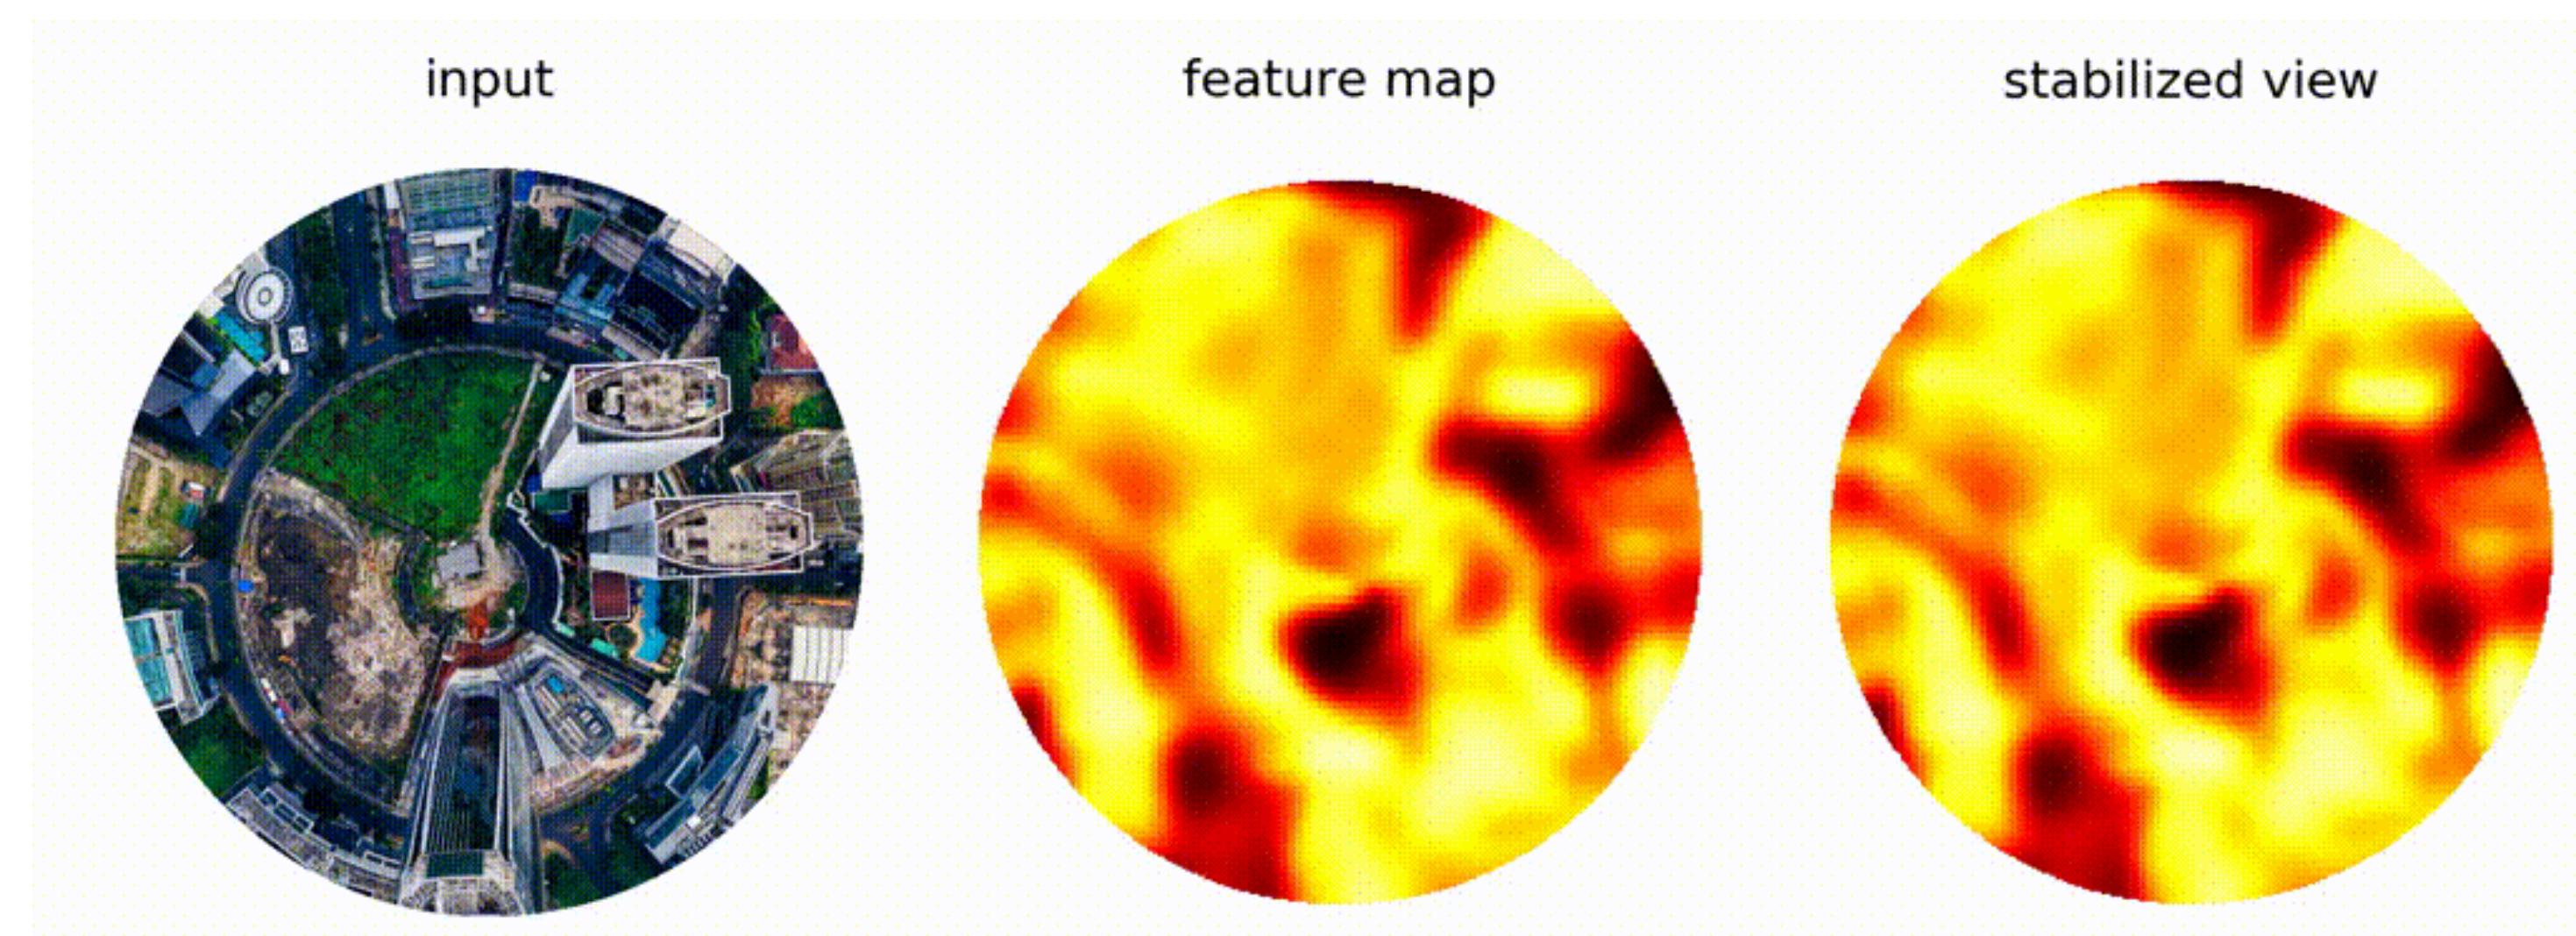

Via convolutions

Geometric guarantees (equivariance)

Normal CNN

Geometric guarantees (equivariance)

Normal CNN

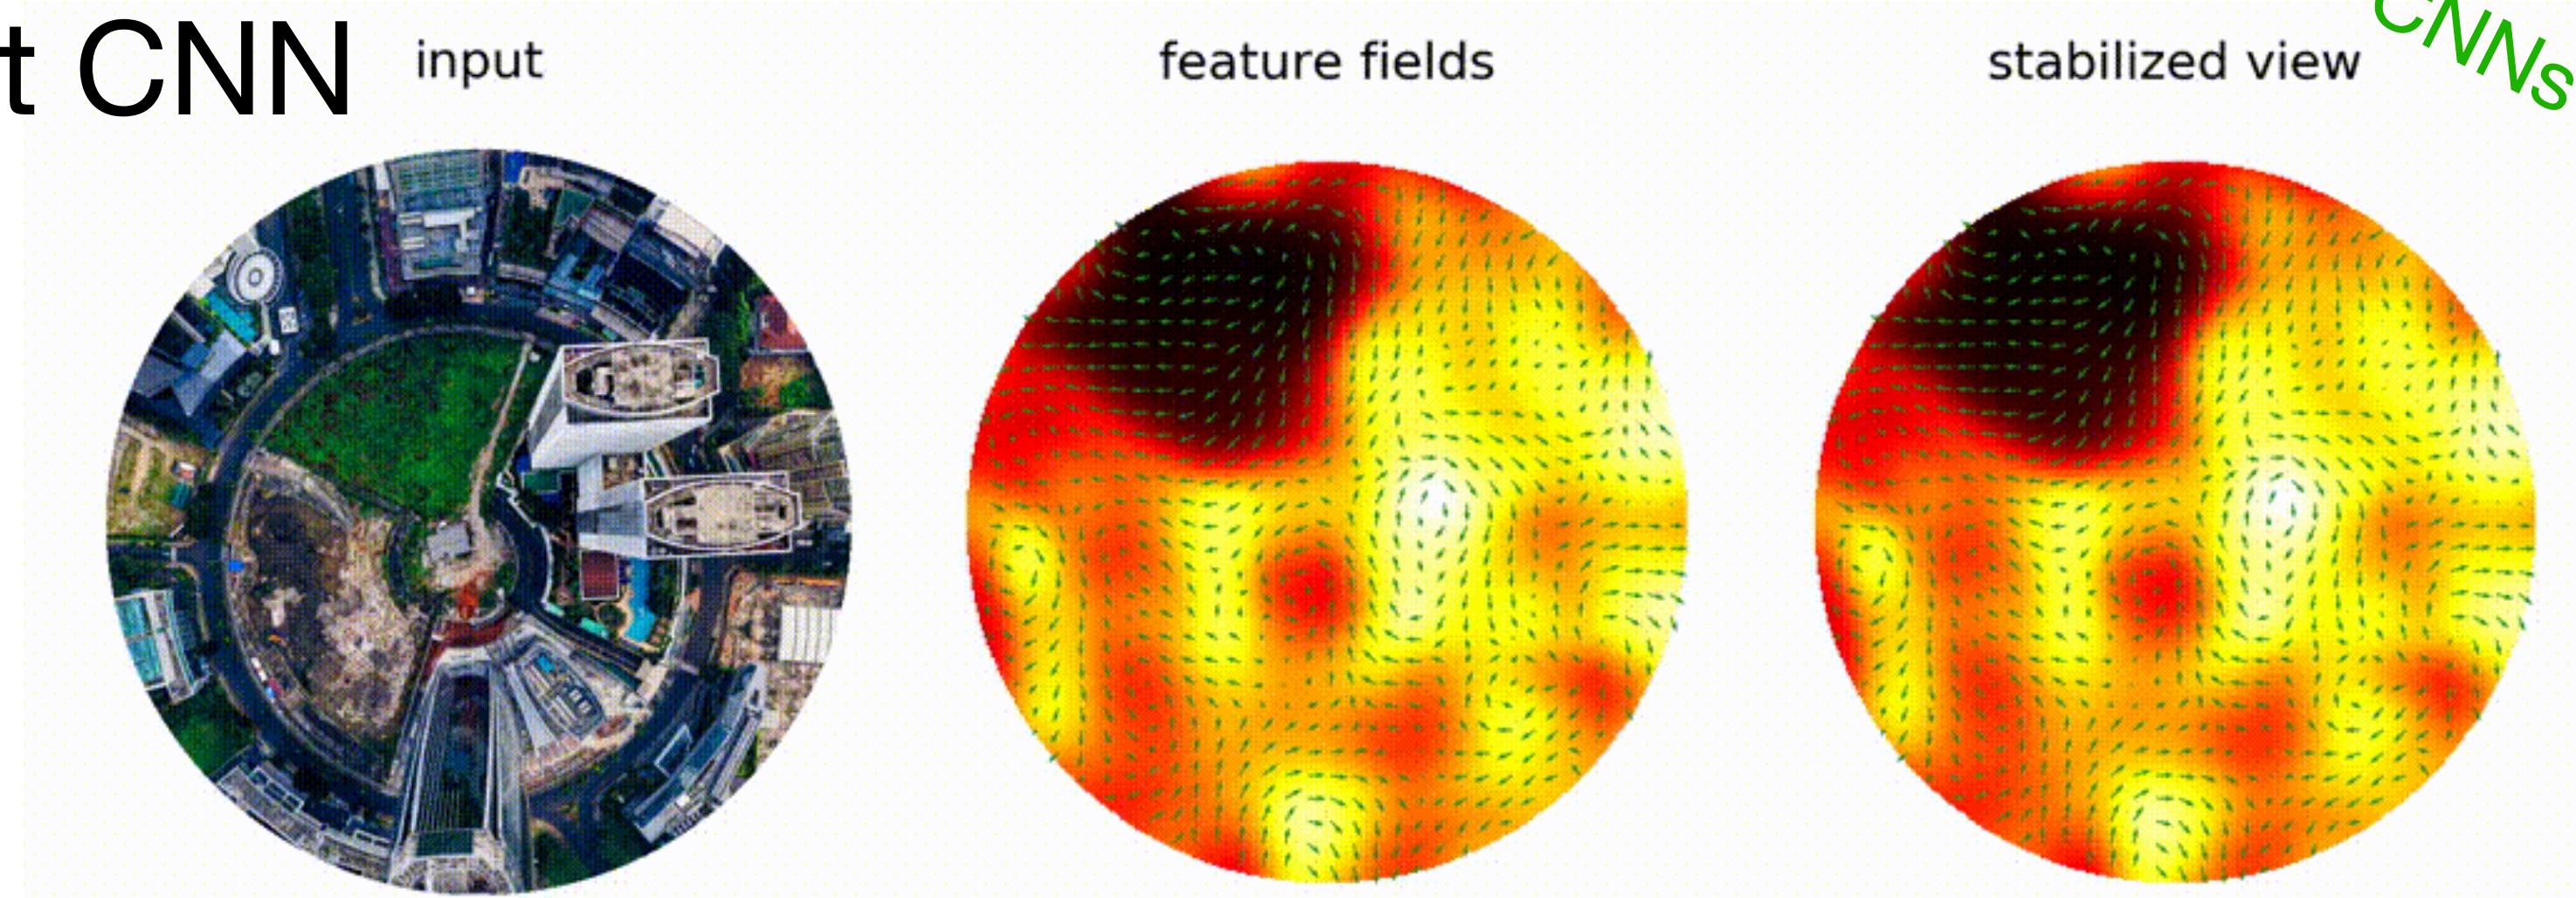

Geometric guarantees (equivariance)

Normal CNN

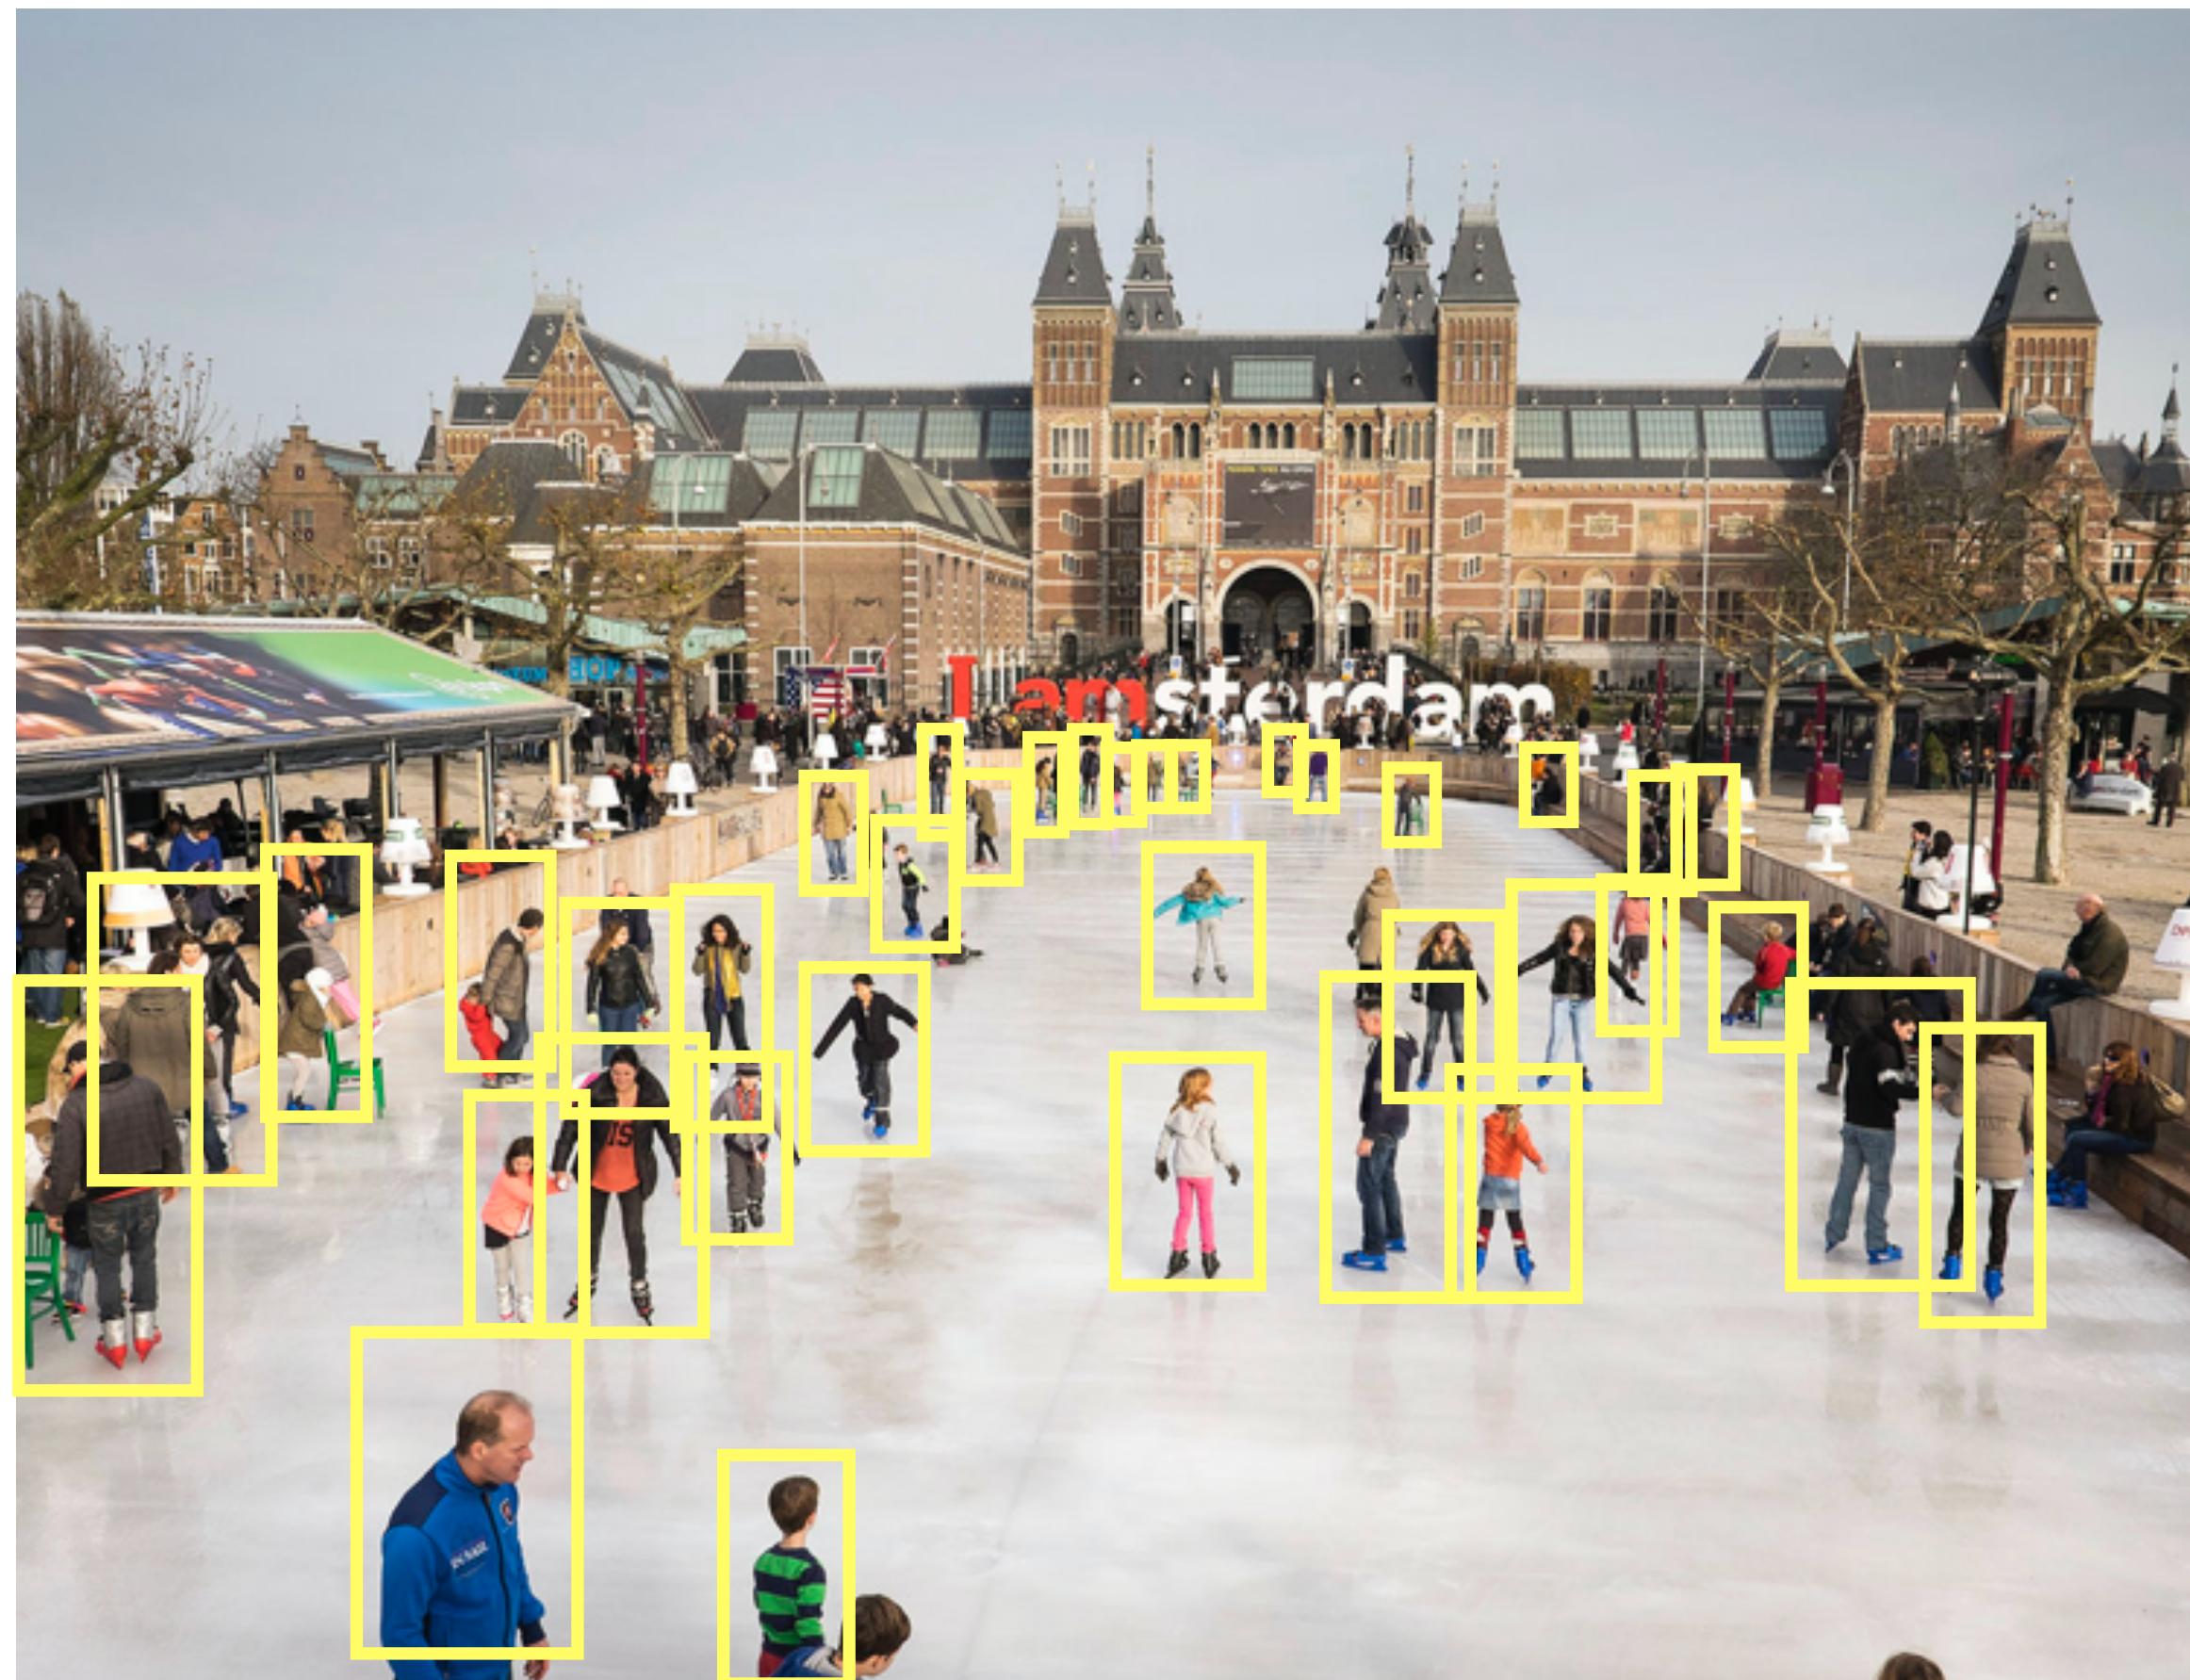

Group equivariant CNN

Figures source:

<https://github.com/QUVA-Lab/e2cnn>

Geometric guarantees (equivariance)

Importance of equivariance:

- No information is lost when the input is transformed
- Guaranteed stability to (local + global) transformations

Group convolutions:

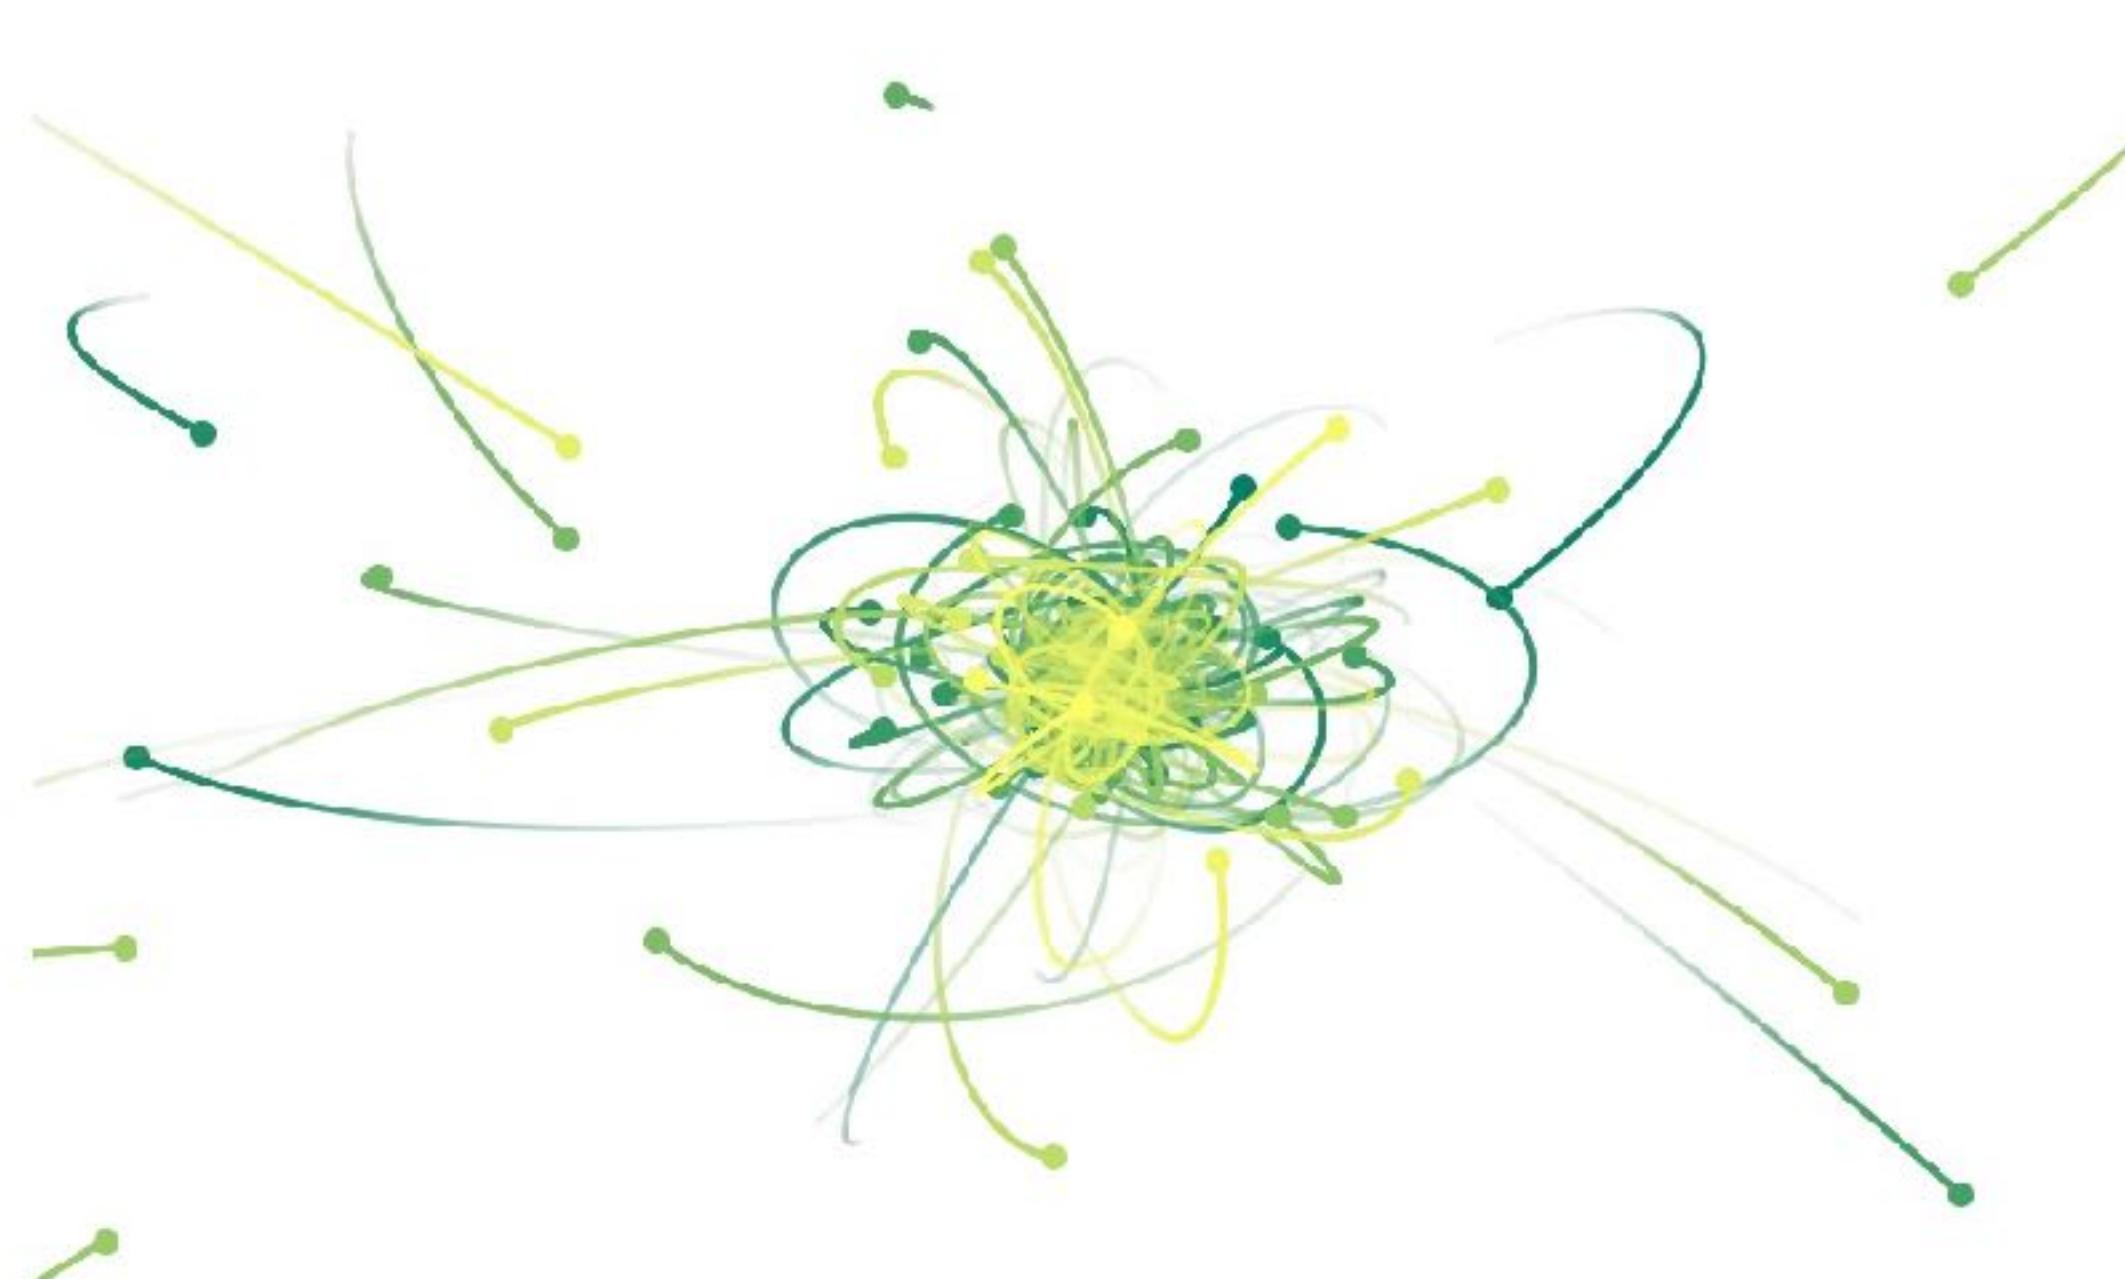

- Equivariance beyond translations
- Geometric guarantees
- Increased weight sharing

G-CNNs are not only relevant for invariant problems but for any type of structured data!

Geometric guarantees (equivariance)

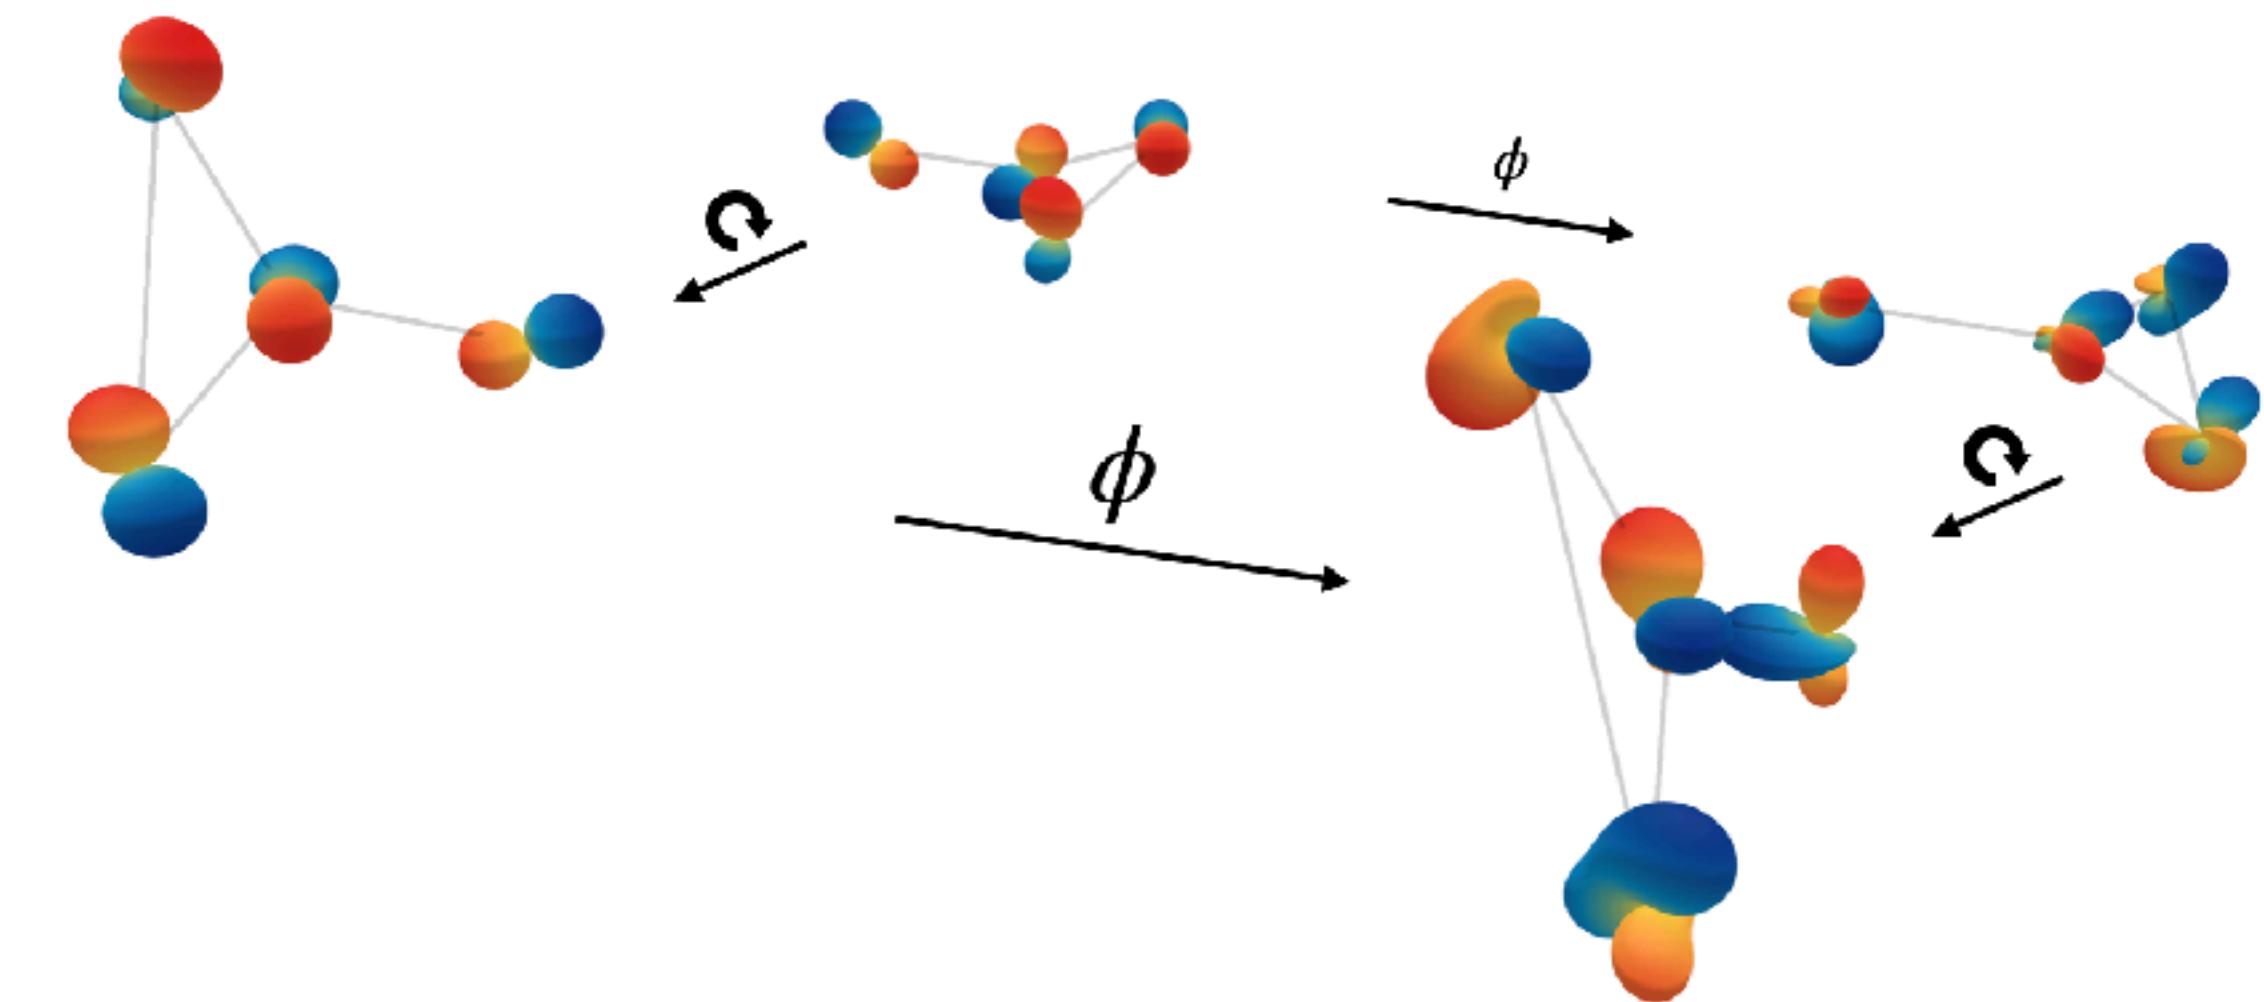

Equivariant problem:

N-body problem (force/velocity prediction)

Equivariant problem:

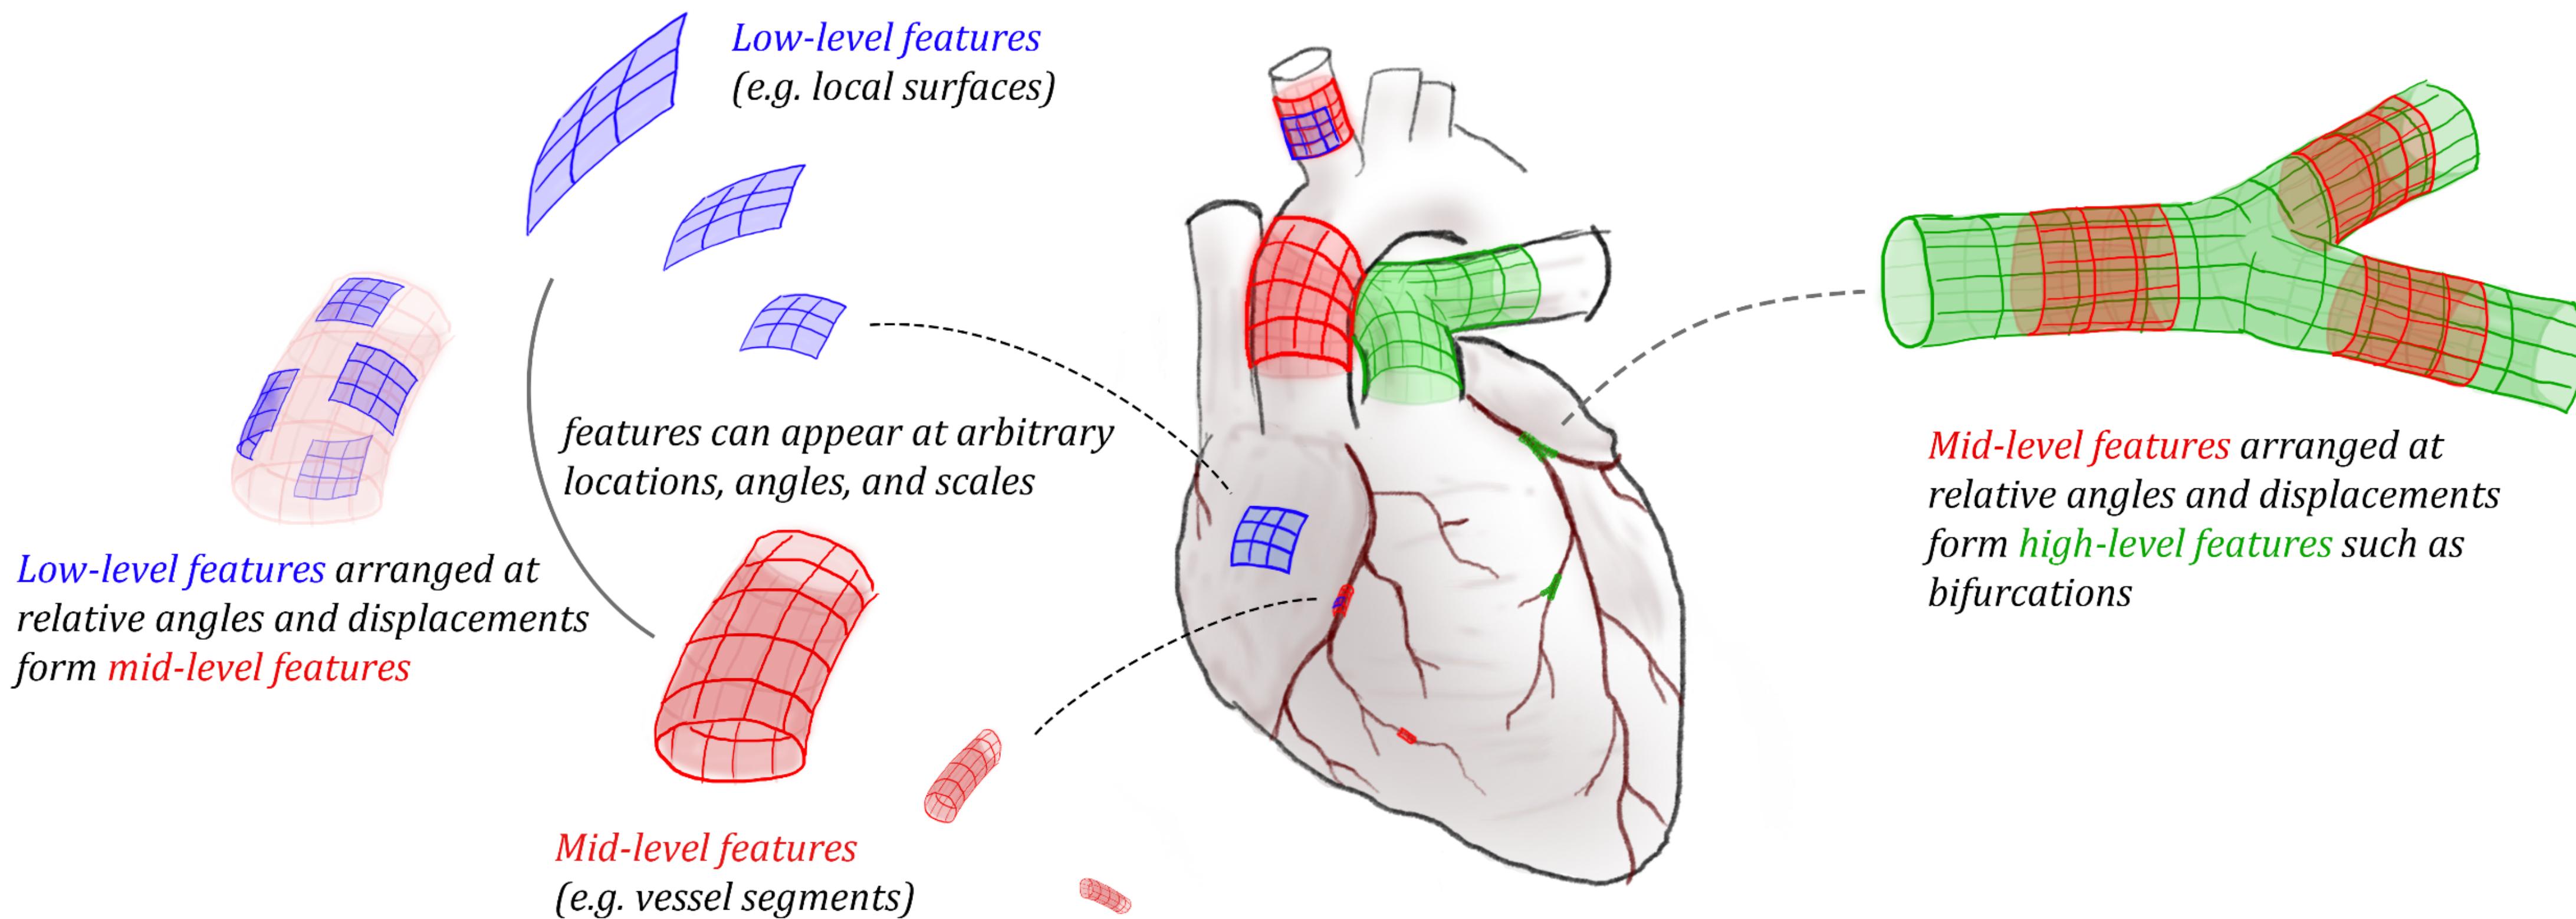

Molecule conformer generation

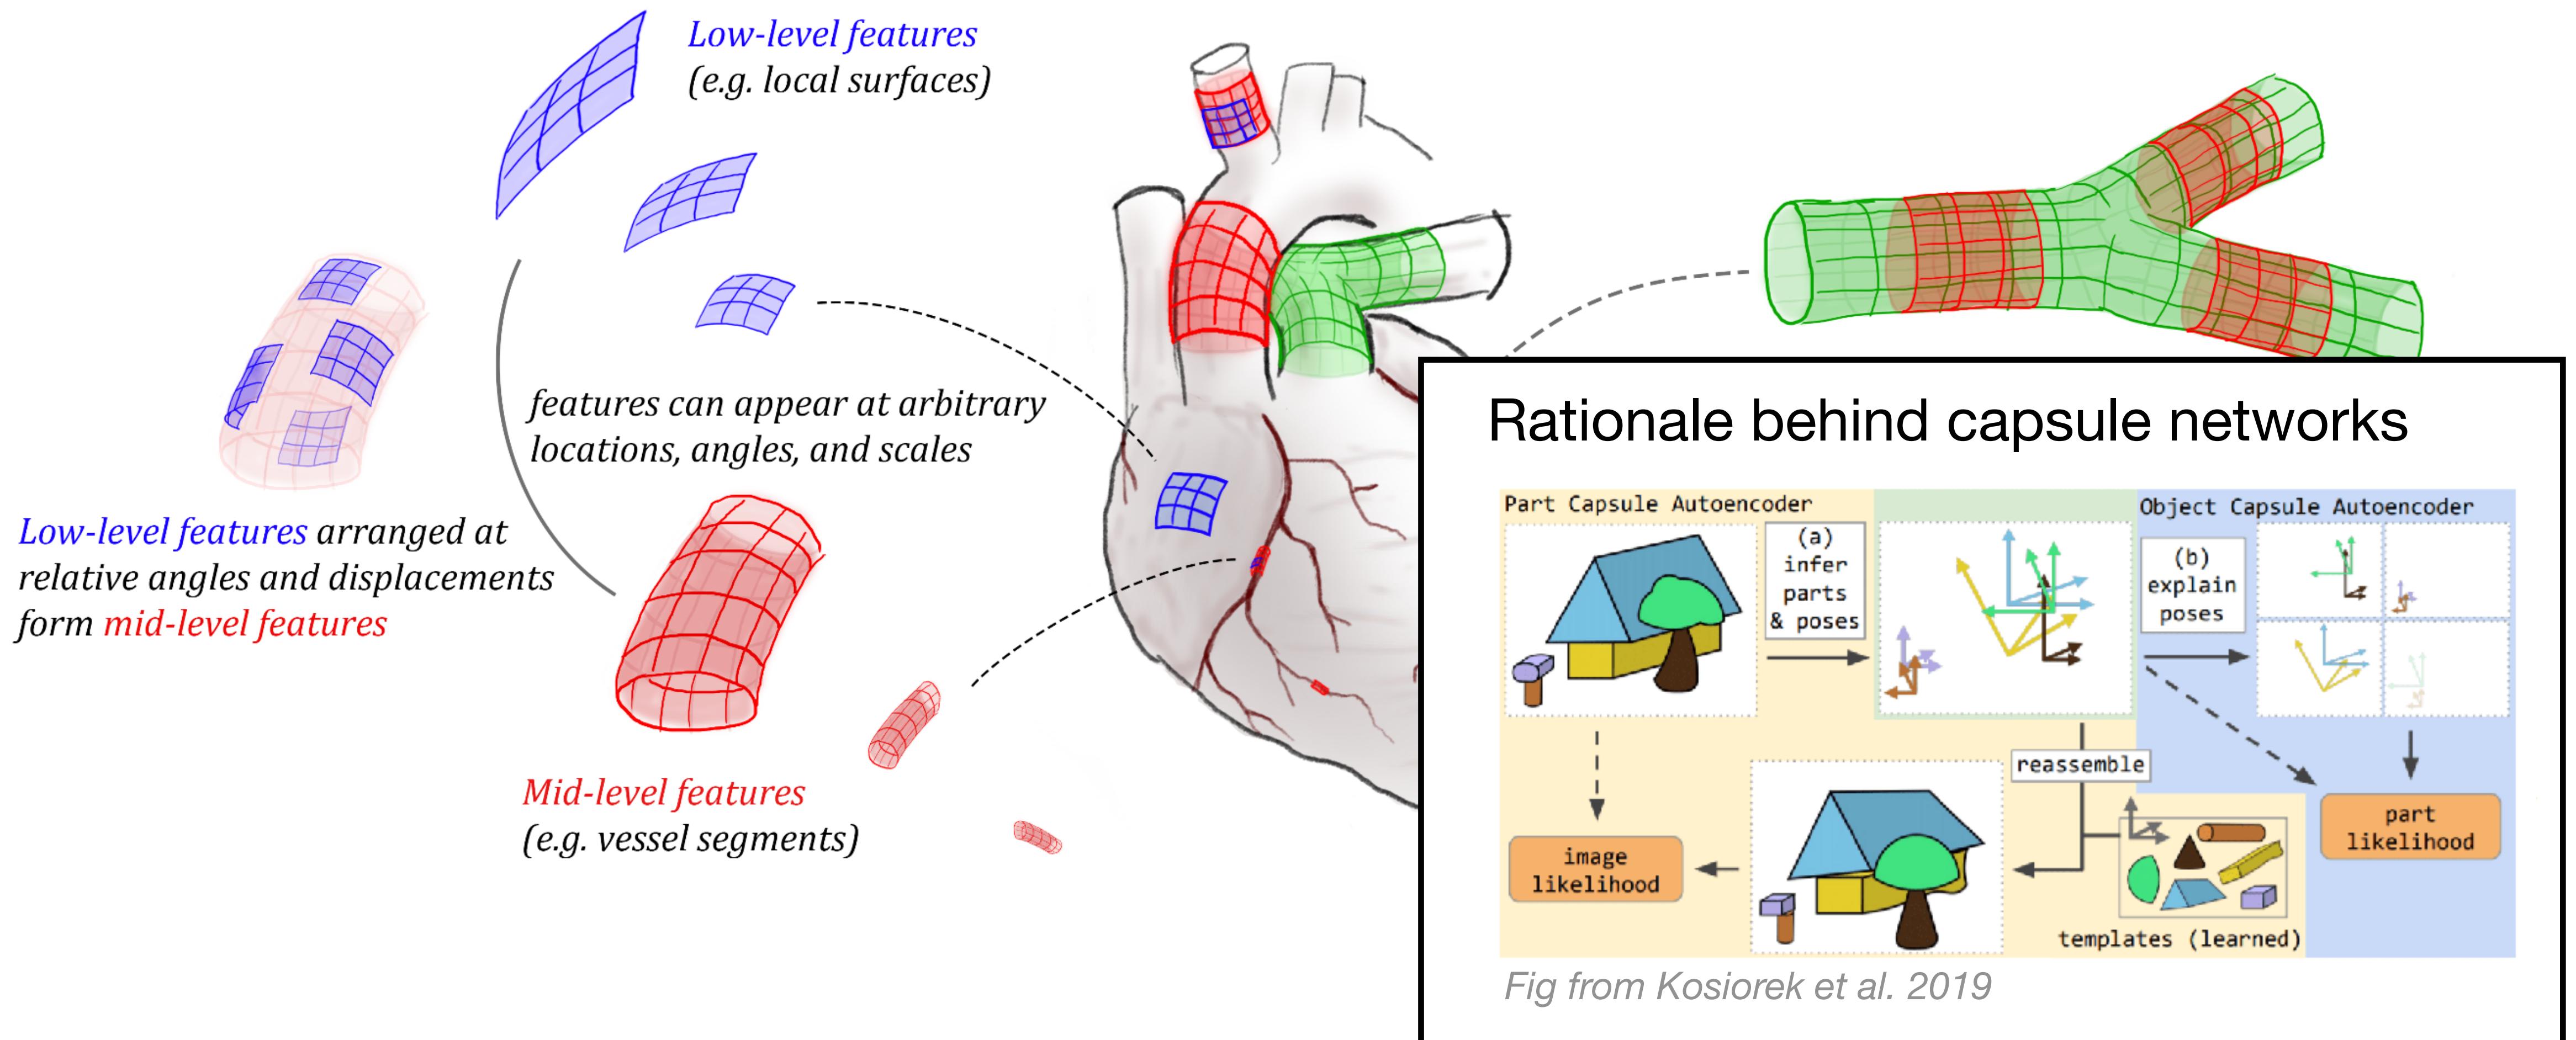

Invariant problem:

Molecule property prediction

Psychology of vision: recognition by components

Psychology of vision: recognition by components

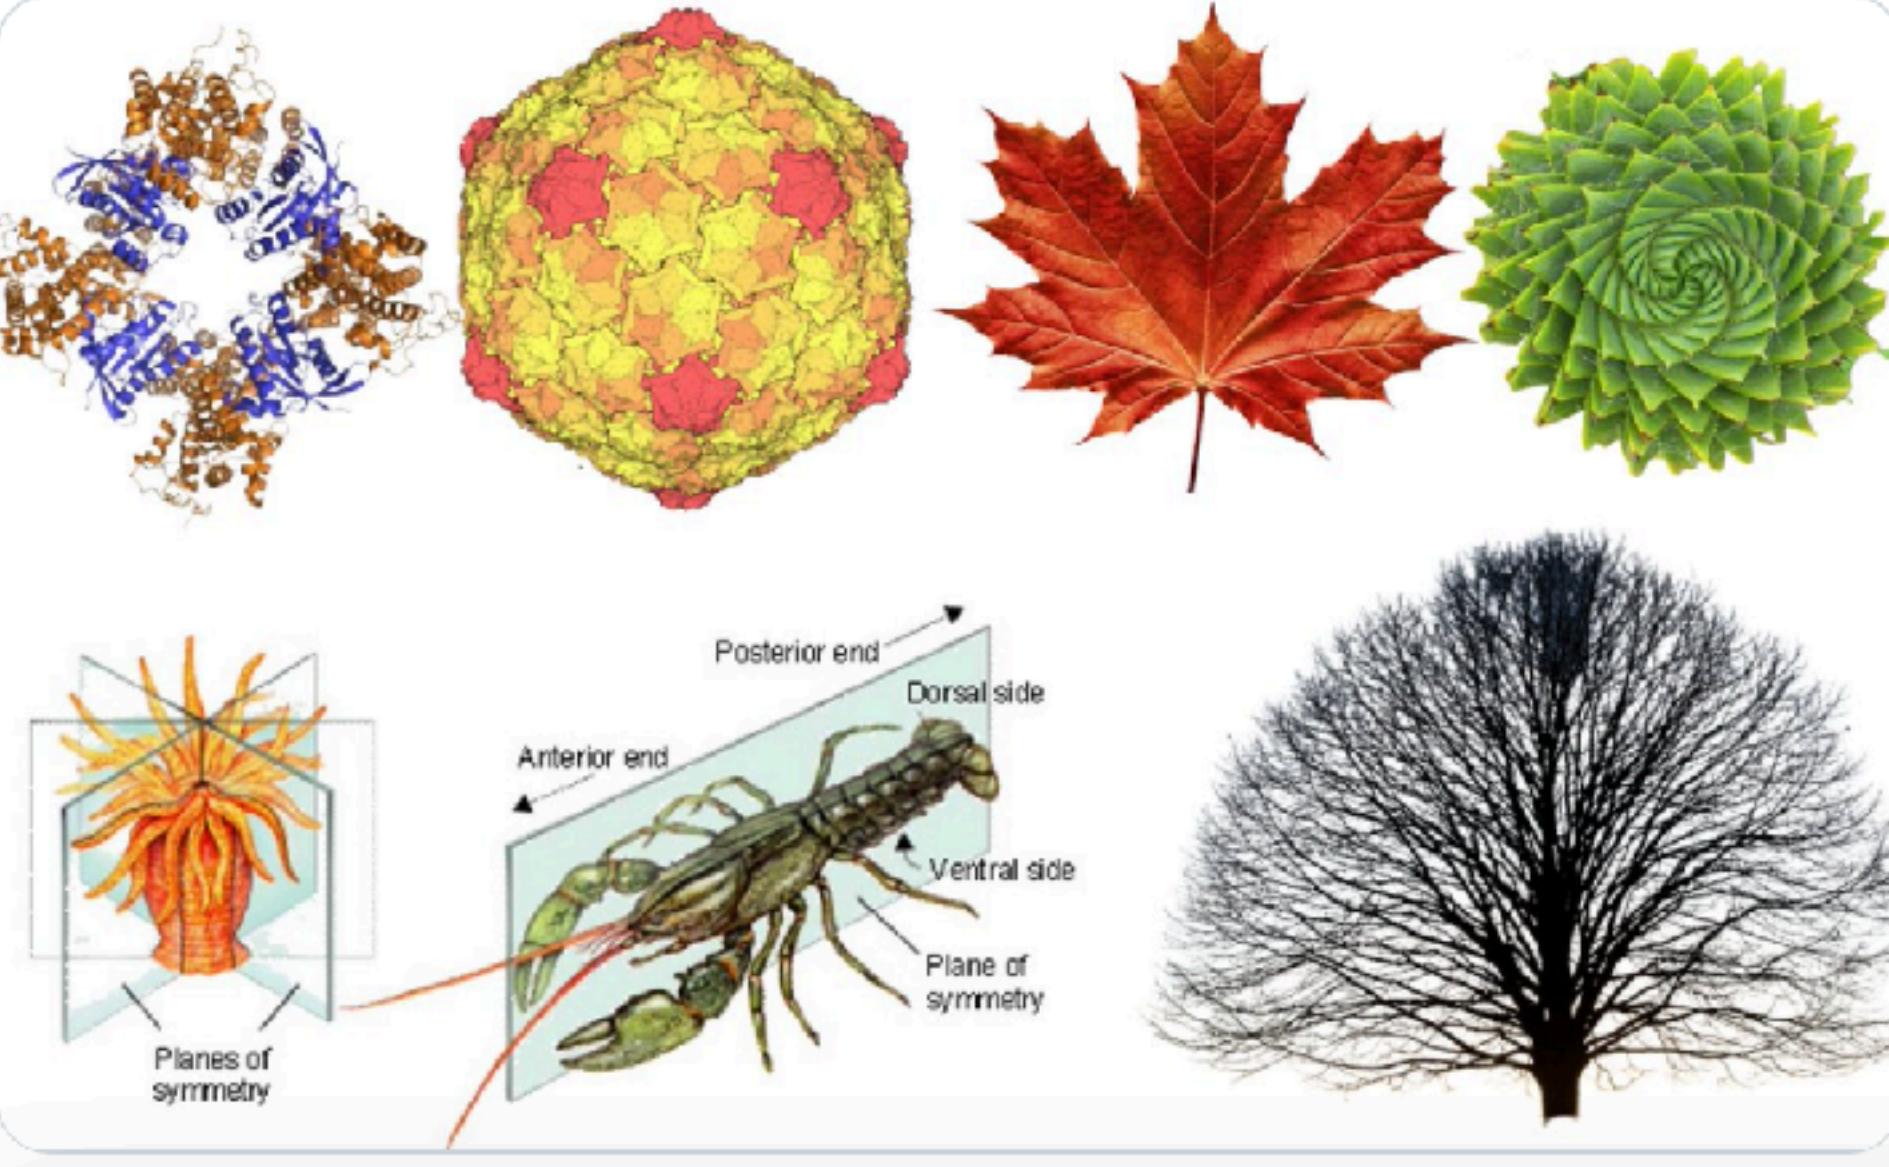

Symmetries in nature

 Chico Camargo ✅
@evoluchico

Have you ever noticed how nature seems to love symmetry? ▲ ■ ●

Evolution has literally trillions of shapes to pick from, and yet, biological structures often show symmetry and simplicity.

This is the story of the discovery that completely changed how I see biology. 🧵

The collage includes:

- A complex, multi-colored protein structure.
- A spherical virus with a yellow and red outer shell.
- A red and orange maple leaf.
- A green, spiraling pine cone.
- An orange hydroid polyp with radial symmetry.
- A detailed diagram of a crayfish showing its body parts: Posterior end, Dorsal side, Anterior end, Ventral side, and the Plane of symmetry.
- A black and white photograph of a tree with a central trunk and symmetrical branches.

Chaitanya K. Joshi
@chaitjo

"Why does evolution favor symmetric structures when they only represent a minute subset of all possible forms? ...Since symmetric structures need less information to encode, they are much more likely to appear as potential variation."

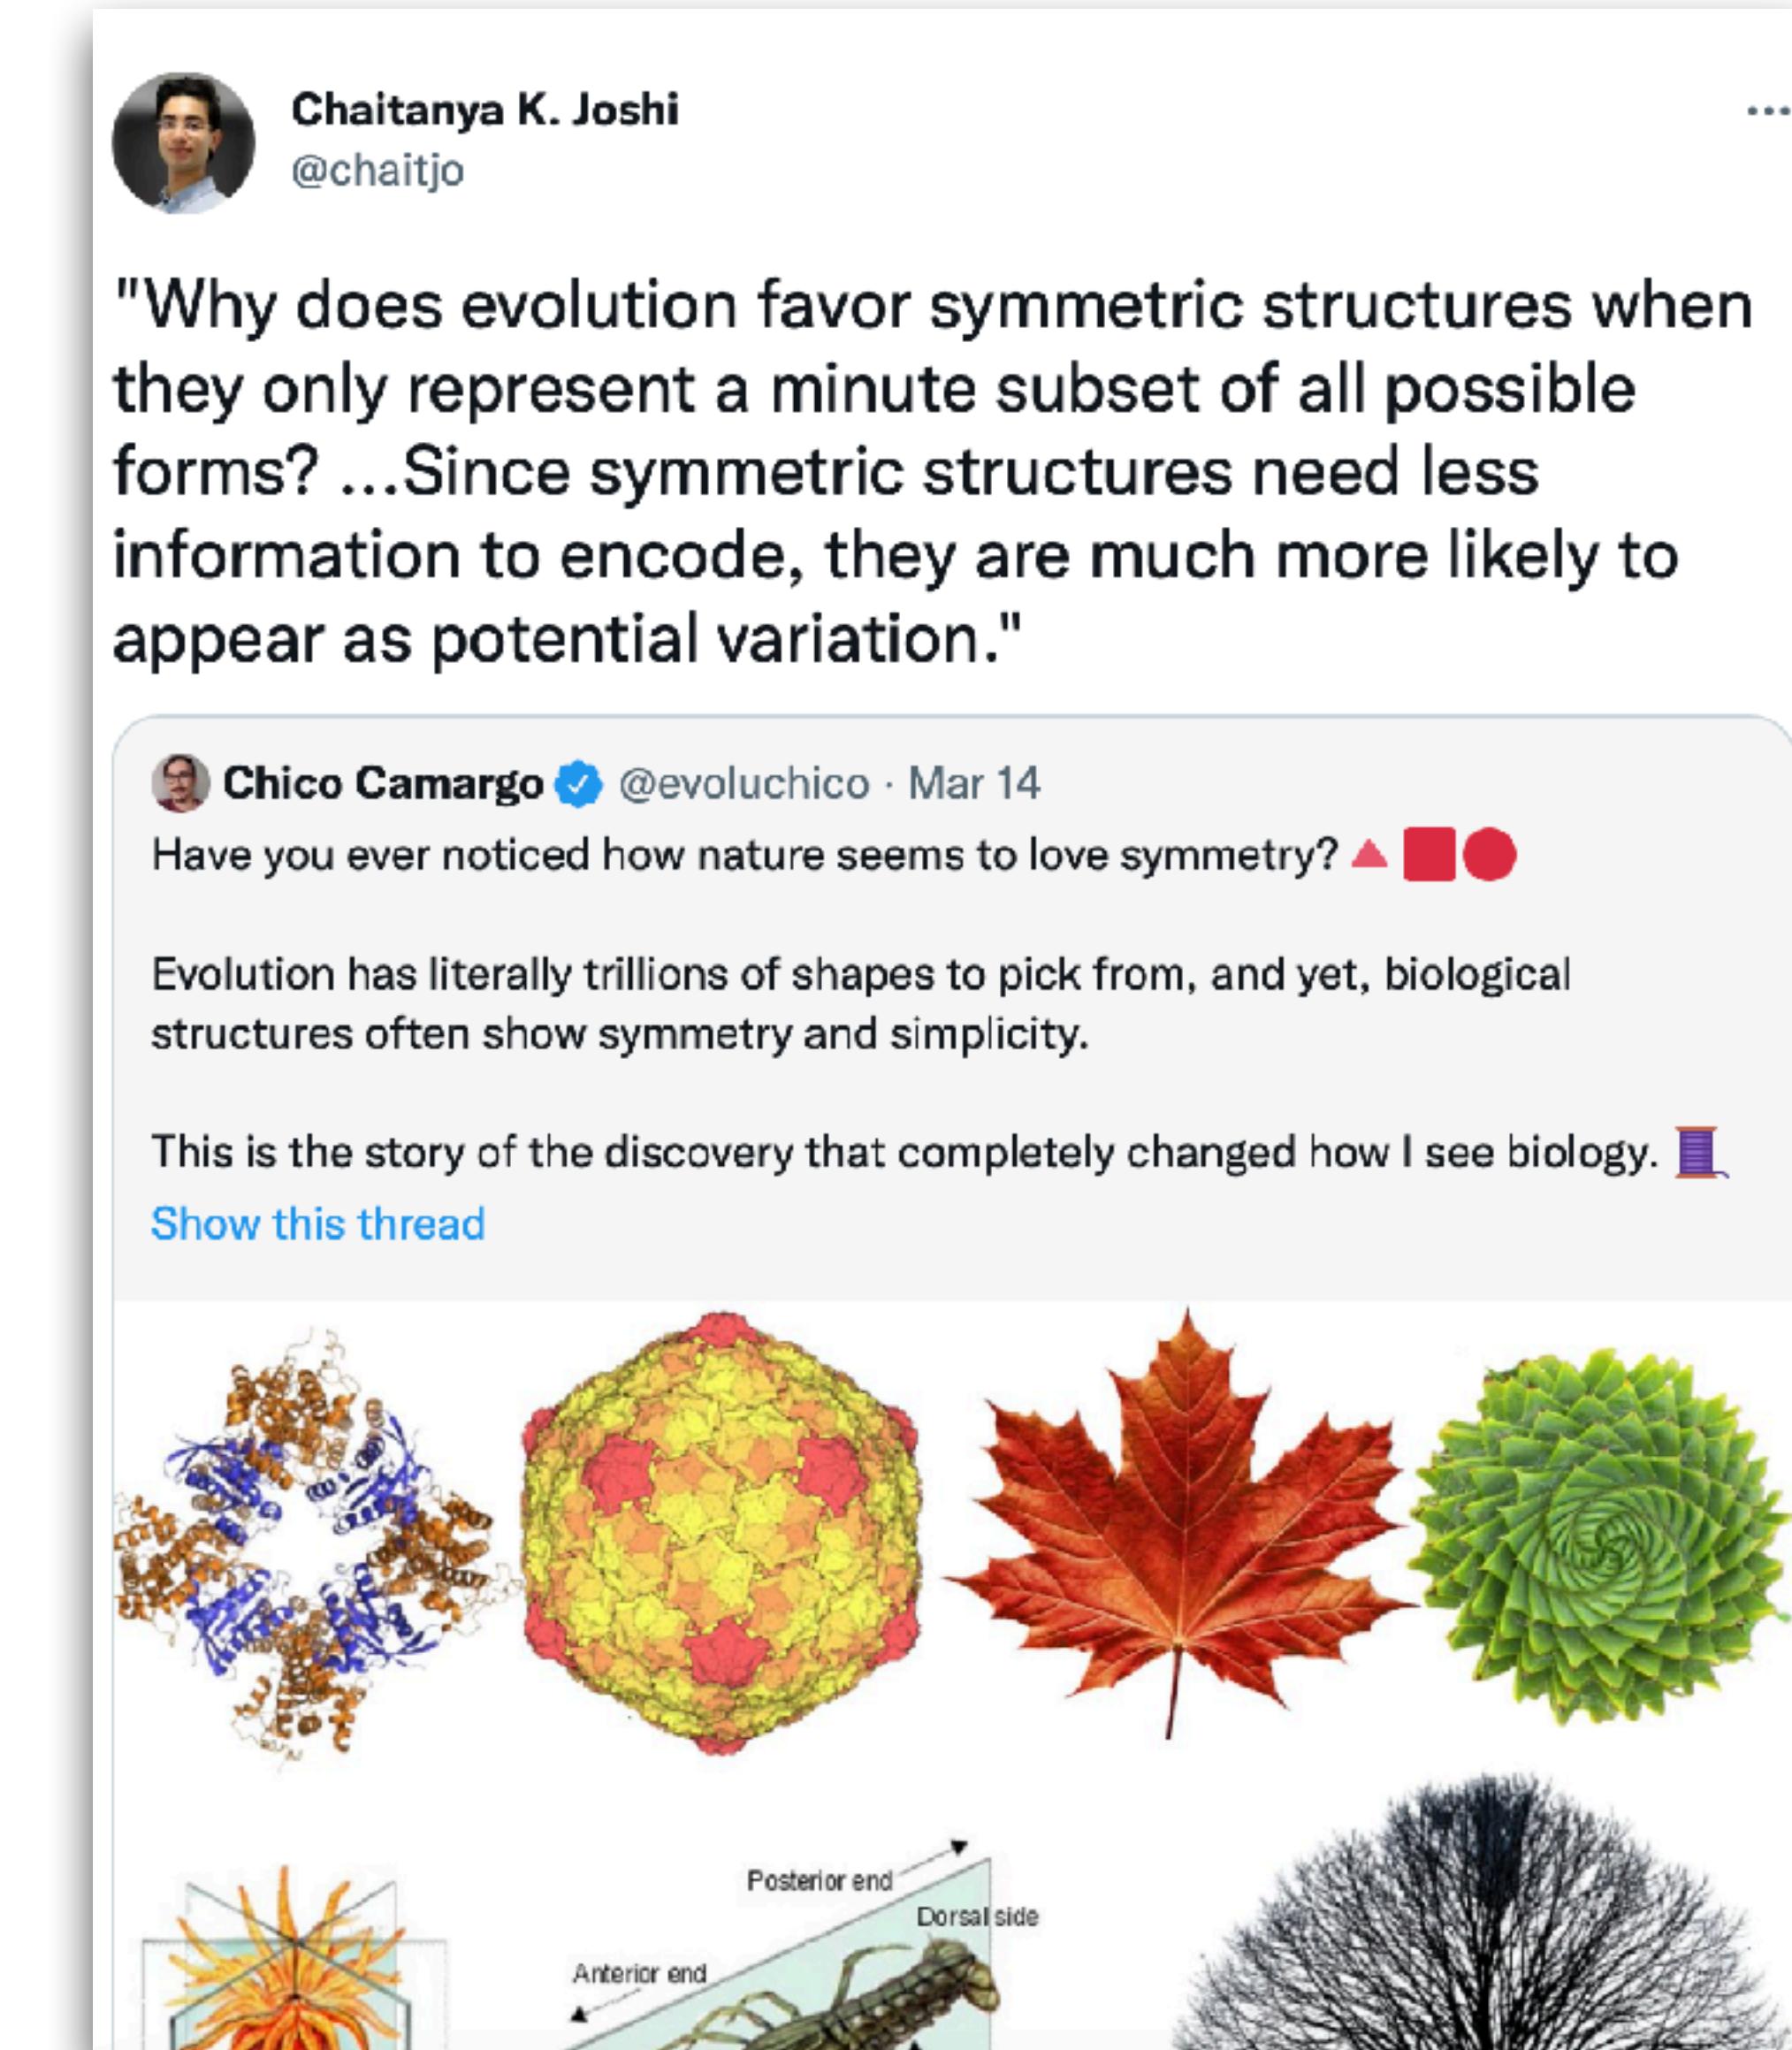

Chico Camargo ✅ @evoluchico · Mar 14
